Constant Dripping Clouds the Film
Anti-Fog Additives for Food Packaging and Greenhouse Films

In food packaging and in greenhouses, water often builds up on the polymer films due to its high surface tension. This phenomenon affects both the appearance and function of the films. Anti-fog additives help to optimize the optical properties. In addition, new technologies are intended to increase the service life of the films.

Specialist Article
27th Mar 2023

The market for plastic films continues to grow. 367 million t plastics produced worldwide in 2020, processed into plastic films [1-3]. An end to the currently not in sight. By 2024, sales will reach a USD 250 billion.

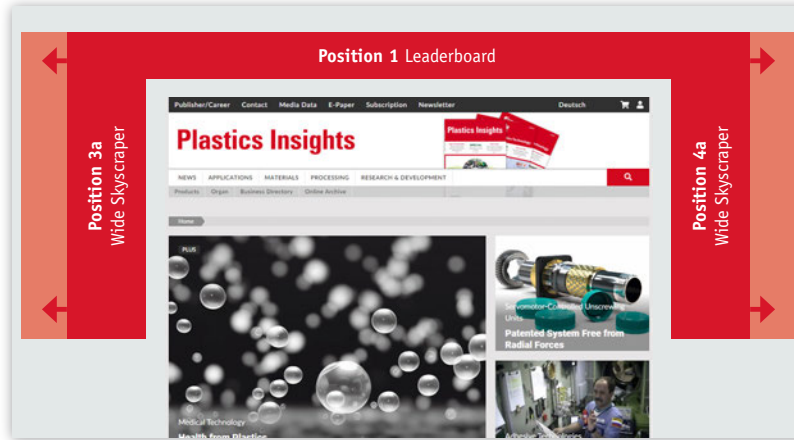

Most plastic films are made of polyolefins, for their easy processability, formability along with mechanical and optical properties. In addition, range of different variants, cover a wide range of contact, and are cost-effective. Disadvantageous however, are their unfavorable fogging properties.
